

Arab American Demographics New York

Major communities: New York City, Yonkers, Utica, Syracuse, Rochester, Buffalo

Consistent with its reputation as a "melting pot", New York's Arab American population is diversified. Large Lebanese and Syrian communities are found in the Bay Ridge section of Brooklyn and in upstate cities, while recent groups of Palestinians and Egyptians can be found in Brooklyn, Westchester County and Syracuse. The city of Yonkers has a substantial settlement of Jordanians. There is also a sizeable number of recent Yemeni immigrants in Brooklyn.

***A Note on Methodology**

The above profile of Arab American demographics was compiled by the Zogby Group in Utica, N.Y. (mail@zogby.com) and is based on data from the ancestry question in the U.S. Census (1990), the Immigration and Naturalization Service, and best on-the-ground estimates compiled after years of visiting, working in, interviewing leaders in, and observations of over 100 Arab American communities.

The significant discrepancy between community estimates and census figures relates to several factors. Census data on the Arab population are derived from a question on ancestry asked only of a sample of the total population, a methodology that negatively impacts smaller groups. The undercount is also higher in urban areas where many clusters of Arab Americans reside, and among immigrants who are more distrustful of government surveys and/or have a language barrier. Some persons of Arab descent are hesitant to identify their ethnicity due to perceived negative stereotypes and prejudice. Finally, the multiple ancestries common among 4th and 5th generation Arab Americans also contribute to the non-response to this question that only tabulates up to two ancestry groups per respondent.
